the 1990s, the number of people in the United States who are 65 years of age or older has increased by 50% (U.S. Census Bureau, 2000). The number of people aged 65 and older is projected to increase to 20% of the total population by the year 2020 (U.S. Census Bureau, 2000). The increase in the number of people aged 65 and older is due to the increase in life expectancy and the decrease in the birth rate. The increase in life expectancy is due to the decrease in the death rate and the increase in the number of people who survive into old age. The decrease in the birth rate is due to the decrease in the number of children born to women and the increase in the number of people who are not born.
